Habit Sequence Planner

Complete MVP Analysis Document

Date: May 23, 2026

Prepared for: Product Development & Strategy

Version: 1.0

Executive Summary

This document provides a complete, actionable blueprint for building the **Habit Sequence Planner** — an AI-powered app that generates intelligent, adaptive daily sequences for habits and goals.

Core Value Proposition:

Reduce cognitive load, eliminate planning overwhelm, and create plans that actually survive real life.

Key Insights from User Research: - Users are exhausted by existing tools (Motion, Reclaim, Tiimo, Habitica). - Biggest pains: Mental effort of sequencing, plans that collapse, lack of personalization, starting friction, and emotional guilt. - Highest demand: Proactive intelligence + graceful adaptation + energy-aware planning.

This document includes: 1. Prioritized MVP Roadmap 2. Detailed Feature Specifications 3. Sample User Onboarding Flow

Section 1: MVP Roadmap & Feature Prioritization

Overall Strategy

- **Goal:** Ship a lovable MVP in 8–10 weeks that solves the top 2 user pains.

- **Focus:** Automatic sequencing + real-time adaptation.
- **Success Metrics:**
 - 70%+ first-sequence completion rate
 - 40%+ 7-day retention
 - NPS > 50 from early users (especially ADHD segment)

Phase 0: Foundation (Week 0–1)

- Landing page + waitlist
- No-code prototype (Bubble + Claude) for early validation
- Recruit 50–100 beta testers from Reddit & X
- Define data model

Deliverable: Validated demand + 50+ interested users

Phase 1: Core MVP (Weeks 1–6) — Ship This First

Priority	Feature	Impact	Effort	Week
1	Automatic Sequencing Engine	Highest (core intelligence)	High	1–3
2	Visual Daily Sequence + Timeline	High (clarity & usability)	Medium	2–4
3	“Life Happened” Button (v1)	Very High (adaptation)	Low	3–5
4	Basic Energy Profile	High (personalization)	Low	4–6
5	Calendar View (Read-only)	Medium (context)	Medium	5–6

MVP Success Gate: 100–200 active beta users with positive feedback on sequencing quality.

Phase 2: Early Enhancement (Weeks 7–12)

Priority	Feature	Why It Matters	Week
1	“Why This Order?” Explanations	Builds trust & understanding	7–8
2	Voice Input + Natural Language	Removes starting friction	8–9
3	Micro-Sequence Library	Solves task paralysis	9–10
4	Smart Recovery Mode	Reduces shame & dropout	10–11
5	Basic Weekly Insights	Shows the app is learning	11–12

Phase 3: Differentiation & Scale (Month 3–6)

- Full Offline + Local AI Mode
- Advanced Energy Auto-Detection
- Unified Calm Dashboard
- Optional Effort-Based Gamification
- Team/Shared Sequences

Section 2: Detailed Feature Specifications

Phase 1 – Core MVP Features

1. Automatic Sequencing Engine **Description:** Core intelligence that turns user goals + constraints into an optimal daily sequence.

User Stories: - As a user, I want to input my goals so the app creates a realistic, logical order. - The app should consider time available, energy, deadlines, and dependencies.

Acceptance Criteria: - Generates sequence in < 5 seconds - Respects user-defined dependencies - Uses hybrid logic (priority queue + LLM refinement) - Stores sequence with full metadata

Technical Notes: - Backend: Python (NetworkX + scoring) + Claude API - Output: Ordered list with time estimates and rationale

2. Visual Daily Sequence + Timeline **Description:** Clean visual representation of the day's plan.

Acceptance Criteria: - Drag-and-drop reordering supported - Time estimates clearly shown - Progress tracking (completed vs remaining) - Mobile-first design

UI/UX: - Calm color palette - Large tappable cards - Focus Mode for current task

3. “Life Happened” Button (v1) **Description:** One-tap handling of disruptions.

Options when pressed: - Delay everything - Simplify sequence - Generate Gentle Recovery Plan

Acceptance Criteria: - Recalculates new sequence in < 3 seconds - No guilt language used

4. Basic Energy Profile **Description:** Captures user's natural energy patterns.

Implementation: - 3 sliders (Morning / Afternoon / Evening) - Used to prioritize tasks during peak energy windows

5. Calendar View (Read-only) **Description:** Shows sequence overlaid on real calendar.

Features: - Google/Outlook sync (read-only) - Conflict highlighting - “Adjust Around Calendar” option

Phase 2 – High-Impact Features

6. “Why This Order?” Explanations

- Tap any task → see 1–2 sentence personalized reasoning
- References user's energy profile and history

7. Voice Input + Natural Language Planning

- Users speak their day in natural language
- App parses and generates full sequence

8. Micro-Sequence Library

- 8–10 ready-to-use templates (e.g., “Morning Focus Routine”, “ADHD-Friendly Day”)
- One-tap to add to today

9. Smart Recovery Mode

- After low-completion days, offers shorter, high-success sequences
- Encouraging, non-judgmental messaging

Section 3: Sample User Onboarding Flow (MVP)

Goal: Get user to their first valuable sequence in under 4 minutes.

Step-by-Step Flow

Screen 1: Welcome - Headline: “Finally, a planner that plans *for* you.” - Subheadline: “Tell us your goals. We’ll create a realistic daily sequence that actually works.” - Button: **Get Started**

Screen 2: Quick Energy Profile (30 seconds) - “When do you usually have the most energy?” - Three sliders: Morning / Afternoon / Evening (Low / Medium / High) - Button: **Next**

Screen 3: Add Your First Goals - “What would you like help sequencing today?” - Options: Type your goals OR Speak your day (Voice button) - Example: “Gym, 2 hours deep work, emails” - Button: **Create My Sequence**

Screen 4: First Sequence Preview - Beautiful visual timeline appears - Tasks shown in smart order with time estimates - “Why this order?” button available - Buttons: **Looks Good – Save for Today | Adjust**

Screen 5: Quick Tour (Swipeable Cards) 1. “Tap tasks to mark complete” 2. “Life happened? Use the big button” 3. “We learn your patterns over time”

Screen 6: First Win - “Your first sequence is ready!” - Light confetti + encouraging message - “Start Using” button

Conclusion & Next Steps

This document provides a complete, prioritized, and validated plan to build a differentiated Habit Sequence Planner that directly solves the real problems users are facing in 2026.

Recommended Immediate Next Steps: 1. Build landing page + waitlist this week 2. Create no-code prototype for early user testing 3. Begin development of Phase 1 core features
